EV Cleaning system

The EV is an innovative and high-tech, eco cleaning system. The technology allows you to clean your entire home with the power of a dry steam. The unit is working with tap water only and all you need is 1-2 liters (0.26-0.53 gal) of it to clean your entire home. As you can guess this helps you to reduce the quantity of water used for cleaning. You can also stop using household chemicals, because the power of EV 3000i can dissolve even the most difficult dirt and all this without using dangerous and poisonous liquids. The secret is in the combination of dry steam, pressure and high temperature.

150° C - 170° C (305° F - 340° F) hot dry steam means:

- fat dissolving;
- disinfection;
- bacteria eradication;
- odor neutralization;
- human health and environmental protection from chemicals,

but above all it is easier, faster, and more ecologically clean!

Dry steam contains up to 5% humidity. When the dry steam comes in contact with the surface, it is not only thoroughly cleaned, but also sanitized. Furthermore, the dry steam penetrates into the cracks where cleaning chemicals cannot reach.

Hot pressurized dry steam removes contaminants quickly and easy. The high temperature instantly kills most vegetative forms of microorganisms. This method of cleaning is extremely useful for the cleaning of health-care establishments, food industry enterprises, catering establishments, kindergartens, vehicles and of course, households.

Cleaning with EV is completely natural and an environmentally friendly method of deep cleaning. It removes even the most stubborn deposits of dirt.

The cleaning power of dry steam allows you to achieve perfect cleanness. EV 3000i also helps you to protect the environment, nature, your health and saves water.

EV Accessories

All accessories are designed and tailored to the needs of the household and business. E V International Ltd. offers various accessories to the EV 3000i cleaning system, which help the almost unlimited possibilities for using the device. In addition to the standard package that comes with the device, we can also produce more specific accessories, such as pads of different hardness for different surfaces or even new brushes and nozzles.

Iron

Aroma kit

Thermofibers

EV Iron

The EV Iron is working with 110 g (3.9 oz) steam per minute. That means it penetrates deep into the fibers to erase wrinkles in one pass. The hot teflon plate glides over your clothing smoothly and easily so this is really not such a chore anymore. This iron is as close to professional equipment as you can get at home.

The combination of EV professional iron and our high quality EV 3000i help you to iron more easily because of the large quantity of steam and increased pressure generated by that unit. Thanks to it, you can iron with ease and for a very short time difficult for ironing fabrics such as linen and others. With the EV professional iron you save more than half of the time for ironing.

EV Aroma kit

You can use this small EV's accessory for more than just cleaning the air. The EV air freshener works with the power of EV 3000i, so you can use it also for different kind of inhalations. It could help you to start feeling better just after 10 minutes. You can put some sea salt if you are feeling sick or just make a steam bath with tea tree oil or chamomile if your sinuses feel a little blocked.

The special place for drops allows you to use essential oils for aroma therapy. This is very helpful for a headache or some kind of physical discomfort after a long working day. The EV air freshener is almost silent and this helps you to relax and enjoy the time for rest.

*All functions of the EV Aroma Kit are recommended to be used up to 10 - 15 minutes.

EV Thermofibers

The EV thermofibers are so delicate that they remove 99% from the known bacteria without any effort. You may use them damp or dry. They are much thicker and absorbent than the regular microfiber towels, which helps them to be more effective. They absorb up to 7 times their own weight, they don't leave marks or flakes. You don't have to brush again or make the surface dry.

EV thermofibers can be washed* in a washing machine up to 95 °C (203 °F), after which they can be tumble dried. The fibers of the towels are reinforced and concentrated, so this keeps the good shape of the towel.

They are specially created to be resistable to EV's working temperature of 170 °C (338 °F).

They can be washed more than 500 times.

* Do not use softener!

You can use EV Thermofibers for:

- cleaning glass;
- ceramics;
- metal;
- inox;
- wooden surfaces;
- grease;
- colored surfaces /polish/;
- electrical devices;
- glasses;
- sunglasses;
- vehicles.

As well as for anything, that could be cleaned in a household.

EV Ironing board

The ironing board is the perfect addition to your EV 3000i ecological and economic choice of iron.

Suction function

The ironing board sucks residual steam that is redundant and unnecessary after the ironing process. Additionally, it cools the ironed fabrics. The perfect ironing result remains for a long time.

Heating function

The ironing board has integrated heating of the surface board. The heating prevents wetting of the surface board and the fabrics that are ironed. No condensation is formed.

Vortex function

The vortex (cold ironing technology) is used mostly in professional ironing centers. Through vortex a soft airbag is formed below the surface. It prevents the direct contact of the materials with the surface. Thus, it eliminates the unwanted wrinkles resulting from ironing.

With the EV Ironing board you have a lot of benefits. The height can be adjusted upwards and downwards. This option is very useful if you have a lot to iron because you can sit comfortably and adjust the height as you want.

When you finish working with the EV Ironing board you can easily fold it down and then move it to the closet with the attached wheels. You can move it forwards and backwards and of course sideways.

EV Clean

Made in Italy

- Biologically decomposable with neutral pH
- Contains natural lanoline
- It has anti-static effect
- 1 liter of EV Clean makes 100 liters of green cleaning solution.

This product is super-multifunctional!
You can use it for:

- Hard floors - wood, tile laminate, linoleum and stone;
- Liquid laundry gel - EV Clean washes all types of textiles up to 60°C (140°F). It works with white and colored laundry (1cap of EV Clean = 1washing cycle);
- All kinds of leather surfaces - furniture, shoes, bags, clothes etc., it leaves no greasy marks;
- Spot cleaning - stubborn red wine, from nicotine, ketchup, grease oil, lipstick, ink stains;
- Car cleaning - floorboard, seats, upholstery, rims, polish, car glasses, lights, it may even be used instead windshield wiper fluid – in the summer;
- Glass cleaning - it provides clear and streak-free cleaning. It also cleans shower cabins, windows and doors;
- Impregnation - EV Clean contains natural lanoline. Impregnates various surfaces and protects them from wearing out.

* Please make sure that you are using the right amount of concentrate.
